Description

I have a problem, i dont know how fix it

In tiki4.2 in wiki pages (others doesn't show this error) editor wysiwyg, does insert an image but it change the code with this code

{`<img />`}, (I know cos I saw it , in the html view)

But when I save it doesn't recognize the image, If I return to the html editor and change the {`<img />`} With `<img />`, it works

Somebody can help me??

Tiki 8 solves many encoding problems, and this looks like such a case.
