Description

using www.domain.com vs domain.com and it will not keep you logged in.

Plus, having www is no longer relevant nowadays

<http://www.fabianlim.name/redirecting-non-www-domain-to-www-using-htaccess>

<http://arjaneising.nl/wp-content/uploads/htaccess-www.txt>

Jonny says

Finally - Marc, did you crack the www url problem? As you said, it would be nice to have as a pref in Tiki and i think the only way to do it for all cases (subdomains, subdirectories etc) is in PHP. For now we could just add it to `local.php` - stuff like: `if (strpos($_SERVER['HTTP_HOST'], 'www') === 0) { // do stuff...`
