Description

Current mod GMAP does not work in 4.2.

Not sure about other versions

Solution

CHANGES THAT NEED TO BE MADE:

. on file /templates/wiki-plugins/wikiplugin-gmap.tpl change \$feature_gmap, \$gmap_key, \$gmap_defaultx, \$gmap_defaulty and \$gmap_defaulty CHANGE TO \$prefs.feature_gmap, \$prefs.gmap_key, \$prefs.gmap_defaultx, \$prefs.gmap_defaulty, \$prefs.gmap_defaulty (all occurrences; intended values are in array prefs in _tpl_var, not directly in _tpl_var as program supposed); if you have put gmap tag on a wiki page then you will see Google map on that wiki page.

. on file /gmap_wikiplugin_save.php change \$feature_gmap CHANGE TO \$prefs'feature_gmap' (at beginning of file; similar reason that change in previous file): to have working 'Save current point' for new values for x and y on 'map and geotagging for this page +' option.

NOTE- WHERE 'feature_gmap' IS ENCLOSED IN '...' REPLACE THE ' WITH SQUARE BRACKETS. FOR SOME REASON THE EDITOR WONT LET ME USE THEM ON THIS POST.

Hi!

Thanks for the contribution.

You were a little unlucky and I want to make sure it doesn't discourage you from contributing in the future.

That plugin was a mods, and thus, never in the official code base. It was made obsolete by PluginGoogleMap, which itself has been made obsolete by PluginMap.

Maps have been revamped in Tiki7 around, the OpenLayers library. And a lot of work was done in Tiki8, Tiki9 and Tiki10. So please upgrade to the latest version 😊

Best regards,

M ;-)
