★★★★★ (0) ?

Description

When creating a new structure, Tiki will automaticly create the strucutre's wiki pages. However, Tiki does not assign a language to the page. Tiki defaults to Unknown. This means that the user must still manually open/edit every created page to set the language properly.

It would be nice if Tiki used the *site's default language* instead of Unknown

Solution

Use the site's default language instead of Unknown when Tiki creates new wiki pages when creating a structure
