Description

In some PHP version, http_build_query would not work correctly and would not show correctly URL parameters for admin and edit options (in converting the templates from SMARTY).

Make sure that http_build_query function from php is working correctly as some version work only with 2 parameters (even it is said to be Php 5.1.1) and others 3 parameters.

See this issue reported in:

http://tikiwiki.org/tiki-view_forum_thread.php?topics_offset=1&forumId=6&comments_parentId=37095

Solution

During install, it would be nice to test if http_build_query work properly with 3 arguments and if not modify the function to work as is.

test if function is existing, work with 2 or 3 arguments.
define or redefine the function http_build_query to work properly.
