Description

Update

Brand spanking new 5 RC-1 from svn. I applied the Personal Blog profile (which was advertised to have a calendar, but doesn't). Then I turned on the Calendar feature, then created a calendar and made an entry. This appears in the list view, but no Calendar view ever appears.

The Tiki is here:

<http://slaveservers.net/>

There's a user tiki with pwrdr wiki if anyone wants to poke around with it.

I'm stuck.

-k

-

On an svn installation of 5.x (just upgraded to latest b2 version May 9th am) We do not see a calendar view, at all.

The list view works and the items are there, but clicking "Calendar View" button invokes the javascript and produces the process-working graphic briefly, but then a blank where the calendar view should be. No calendar.

Tried 5 ALive theme, Strasa, and the News. No calendar.

What could we be missing that the calendar does not appear in calendar view?

Thanks,

-Kent
