add history & rollback capabilities to structures

Description
add history & rollback capabilities to structures (record dump somehow when struct. changes, or allow saving structure dump for backup...)
This way, when the structure gets mixed by machine or human error, the structure can be rolled back to the previous state.

This way, we could be more open for registered users to manage http://doc.tikiwiki.org/Documentation (or others) without the risk of failure when nodes get moved to the wrong place (due to some bug in the code). Or due to mistake by benevolent newbies mixing things without bad intention.
UPDATE: Still desired for some LTS version.
