Description

lib/tikilib and lib(score/scorelib.php functions send no timestamp argument to tiki_users_score insert queries. This results in query failure because tiki_users_score tstamp column in Tiki 1.9 distrib. contains a 'not null' constraint.

The following PostGres query sets the default timestamp of tiki_users_score alter column tstamp to 'now', which ensures against attempted insertion of NULL values from the tiki codebase:

```
alter table tiki_users_score alter column tstamp set default now();
```

Solution

Please upgrade to a more recent version of tiki,
try again, check tracker items and add a new item if the problem persists.
