Description

This may be 2 bugs:

When you select Admin - External feeds and create a new feed, a blank page is presented after clicking "Save." It appears as though the external feed is saved, though.

Created feeds are not being updated on a schedule, nor are they being updated when the "Refresh" option is clicked. Clicking "Refresh" results in a blank page being displayed.

This has been

http://tikiwiki.org/tiki-view_forum_thread.php?comments_parentId=37418&topics_offset=23&topics_sort_mode=lastPost_desc&forumId=4 class="wiki wikinew text-danger tips">reported on the forum.

Workaround

This is not a bug. On CentOS 5, the php-xml package is required for this feature to work. (Execute the command "yum install php-xml" at the command line, then "service httpd restart" to stop/start the Apache web server.)

Importance

Linux hera.axonsolutions.com 2.6.18-164.11.1.el5 #1 SMP Wed Jan 20 07:39:04 EST
2010 i686 i686 i386 GNU/Linux
glibc-2.5-42.el5_4.2
httpd-2.2.3-43.el5.centos
php-5.1.6-27.el5
mysql-server-5.0.77-4.el5_5.3

Is the dom extension enabled? You can check phpinfo.

axon-obriend 29 Jun 10 18:10 GMT-0000

Looks like it's not: I see '--disable-dom' in the 'configure command' section. I also don't see a separate PHP "dom" RPM package to install for CentOS.

Just did some quick research. Seems like I need the php-xml package (there is also a php-xmlrpc package). Let me see if installing this package improves things.

axon-obriend 29 Jun 10 18:26 GMT-0000

Looks like for CentOS5, the php-xml package is also required (and a restart of httpd is required after installation).

It's working now - many, MANY thanks for all your help!

This should probably be reclassified as an enhancement request for a check for the required PHP feature during the installation process (certainly a documentation update that specifies the php-xml package as a requirement).

alelopez 30 Jun 10 13:58 GMT-0000

Sorry for the intrusion but in Ubuntu 8.04, install the php-xml-* packages and it did not work, I keep getting an empty list.

I review all instructions that were given here and nothing

Any other ideas?

Philippe Cloutier 30 Jun 10 15:44 GMT-0000

alelopez, could you show your phpinfo?
