We recently upgraded from Tiki-4.X to Tiki-5.X. We are running Tiki-5.3.

There seems to be a bug when trying to modify a user under the administration page (tiki-adminusers.php). When trying to click on a user, one is asked to confirm (which is a new workflow) and then taken to the Edit User page. However, when one tries to modify something (e.g. password, email address), you are asked to confirm again, but it never completes.

Here is a set of detailed steps to reproduce the problem:

1. Go to admin users (tiki-adminusers.php)
2. Click on user "demo"
3. Click "Click here to confirm your action"
4. Change email address from demo at demo.com to demo at demo.org
5. Click "Save"
6. Click "Click here to confirm your action"

- Nothing happens. The page address is "tiki-adminusers.php#", but it never changes from the
confirm action page. "Go Back" does not work, but "Return to Home Page" does.

Solution
This is a known regression from 5.3 which is fixed. See http://tiki.org/ReleaseNotes5.3#Regressions.
