Subject
Users must have global tiki_p_view_trackers to see tracker item even if tracker specific perm set

Version
6.x

Category
• Consistency

Description
The problem is summarized in 2:

1) The category perm checking for individual tracker item always happens no matter what.

2) Even when it makes sense to check for category perms, the filter appears to not take into account specific tracker perm, because trackeritem is a "different" object from tracker.

The problem is in the following piece of code in trackerlib.php
function filter_categ_items($ret) {
    //this is an approximation - the perm should be function of the status
    global $categlib; include_once('lib/categories/categlib.php');
    if (empty($ret['itemId']) || $categlib->is_categorized('trackeritem',
        $ret['itemId'])) {
        return Perms::filter(array('type' => 'trackeritem'), 'object',
            $ret, array('object' => 'itemId'), 'view_trackers');
    } else {
        return $ret;
    }
}
