Description
When previewing an item, you get:

Notice: Undefined index: calendarId in /home/amette/public_html/tikiwiki-BRANCH-1-9/tiki-calendar.php on line 395

On saving, this comes double (with another line number) and at the first try I got a lot more about "Undefined index: places, people etc"

Solution
Create a nice error-message, telling the user, that he has to create a calendar first.

Importance
6
