Description

With a home page from an imported Mediawiki at tiki-index.php?page=Main+Page putting either that, or that with <http://192.168.2.6/tiki-index.php?page=Main+Page> or that with 192.168.2.6/tiki-index.php?page=Main+Page has no effect at all. The documentation for this feature claims that any entry here should override the Use tiki feature as homepage scroll selection, but that remains in control here, and its selection is what is shown.

So either there's a way to get this to work and the documentation's incomplete. Or the feature is broken. If the second, what would the most direct work-around be?

You need to:

1. Use the Wiki feature as the home.
2. On Wiki Admin page, use Main Page as the home page.

Please see the docs for details.

Retest and close, as necessary.

Gary Cunningham-Lee 13 Mar 11 15:12 GMT-0000

It should be possible to specify any URL as the Tiki site index. This was possible in earlier Tiki versions, so is a regression. People are still reporting this problem in Tiki 6.2.
