Subject
LDAP debugging causes error?

Version
6.x

Category
• Error

Feature
External Authentication (LDAP, AD, PAM, CAS, etc)
Logs (system & action)

Description
System environment:
Tiki 6
Windows Server 2008 64bit
Apache x64 2.2.11
PHP x64 5.2.5 (lib/smarty/libs/internals/core.is_secure.php patched to make it work)

LDAP authentication against AD does work once configured properly

BUT
Debugging the configuration was hard because turning on logging caused errors!
When logging is off, all is well. When logging is on and line 346 of lib/auth/ldap.php is commented out, all is well.
It seems that when logging is active, "$filter->asString()" on that line causes an error on our system.
The same call is made on line 262 with a simpler filter and works OK.

Perhaps when checking groups, asString is returning too much for the logging system to handle?

Solution
backported 7.x fix. truncate logs messages to 200 chars before posting

This is verified against the Microsoft WebApp gallery install, upgraded to 6.3.
