Description

Hi,

Particularly for Chibaguy, to show screenshots about the problem

The col3 (or right-modules) are most of time send to the end of "middle".

This generally come from a "center" with two lateral column, when the calculated width of the three column is greater than the limited width of the container.

This seems to happen in several cases (mines), I commonly uses fivealive and have tested here "business". I get the same since a little more than one week.

Joined four screen shots from top to down (1920x1200 selection cropped).

You can see :

1. The top and the right column not in place
2. the middle : an anomaly on the width and all the display of the module action calendar (somebody has tried something while I am working on a lot of commented bugs on calendars 17 bus interacts, I have to merge or replace) . The ### comments are test to check modification at execution on my version.
3. Where the col1 is ended and col3 begins
4. The col3 end before the main footer

This is what I got with no SVN conflict on this.
