Description

This example shows that something goes wrong when zipped files with the same name (but different content) are uploaded and unzipped by Tikiwiki.

- 1.) Create a test.txt file with some content and zip it to test.zip.
- 2.) Upload this file to a Tikiwiki File Gallery and choose to unzip it.
- 3.) Create another test.txt file with different content and zip it again to test.zip.
- 4.) Upload this file to a Tikiwiki File Gallery and choose to unzip it.
- 5.) Now there are two test.txt files in the gallery; now DELETE the first one.
- 6.) If you now try to download the second one, a blank page will be shown; it seems that the php code reaches a 'die' because the file could not be found!
