Description

As of Friday 4/15/2011, code plugins stopped displaying their contents on my 7.x head site.

For example, I have a code plugin with no options set that contains:

```
function validate_a as p (e as p) 'Sample validation function. 'Data for the current row is available
in 'e.data'. 'For example, e.data.firstname, e.data.lastname if e.data.a = "" then
validate_a.hasError = .t. validate_a.errorText = "a cannot be blank." end if end function
```

On my site, nothing displays except the edit marker for the plugin.

Workaround

Turning off CodeMirror restores the display. Adding a GeShi language tag restores color coding.
