Description
: When I evaluated the software for my project, I was very happy when the documentation said that it was possible to create a workflow with categories, transitions and watches. But I realized that watching a category only triggered a mail notification when the transition was made in the tiki-admin_categories.php page. It was useless for me!! 😟(

Solution
: I studied the code and I discovered a way to put notification when a transition is made with the transition module (only for wiki pages).
: I inserted this code in 184 line:
: if ($type "wiki page" or $type "wikipage" or $type == "wiki_page") {
: $category = $categlib->get_category($state);
: $categorizedObject = $categlib->get_categorized_object('wiki page', $object);
: $values = array(
: "categoryId" => $state,
: "categoryName" => $category'name',
: "categoryPath" => $categlib->get_category_path_string_with_root($state) ,

```
"description" => $category'description',
"parentId" => $category'parentId',
"parentName" => $categlib->get_category_name($category'parentId') ,
"action" => "object entered category",
"objectName" => $categorizedObject'name',
"objectType" => $categorizedObject'type',
"objectUrl" => $categorizedObject'href'
);
$categlib->notify($values);
}
```
