Description

A blank line out of a paragraph should not start a new paragraph (as in 4.2). If feature_wiki_paragraph_formatting_add_br is on, an empty line is created on top of the new paragraph.

It comes from lib/tikilib.php line 6838ff

```
} elseif (!$in_paragraph && !$contains_block) {
```

```
// If not in paragraph, first non-blank line; start a paragraph; if not start of div created by plugins
```

```
$data .= "<p>";
```

```
...
```

in the comment it is stated that the paragraph should only begin at first NON-BLANK line

Solution

I have been able to correct it by changing it to:

```
} elseif (!$in_paragraph && !$contains_block /* bubi: first non-blank line starts a para */ && !empty($tline)) {
```

```
// If not in paragraph, first non-blank line; start a paragraph; if not start of div created by plugins
```

```
$data .= "<p>";
```

This appears to be solved by r34436 for Tiki 8. Chealer
