Description

We are using Tiki v6.2 vanilla, PHP 5.3.3. When using the WYSIWYG_6x default profile of:

Editing and Plugins Wiki Paragraph formatting (ON, however default: off) ...but still create line breaks within paragraphs (on) HTML Purifier (on) Wiki Allow HTML (on, however default: off) WYSIWYG Content is parsed like wiki page (on) Content is partially wiki parsed (off) Use Wiki syntax in WYSIWYG (off)

we can not edit a section using the Edit Section button. A blank WYSIWYG screen is displayed and if you enter content and save it gets thrown to the bottom of the wiki page and not within the section.

Reproduce: Create a blank wiki page in WYSIWYG, create a bunch of headers, save, view edit icons (if not already), click on "Edit Section" button.

I experienced this bug w/ 6.4 (?) yesterday moved to 7.x (JumpBox version) and continue to experience this bug. It has made my site useless, as I cannot edit key pages.

Marc Laporte 26 Jan 12 08:01 GMT-0000

Hi!

I think Section edit is only for wiki mode.

Can you retest in 8.x?

Thanks!

Marc Laporte 27 Jan 12 03:07 GMT-0000

You are using maketoc with WYSIWYG, so you are getting section edit buttons, but they don't work (blank page)

workaround: turn off section edit
