Description

in older versions eg. 2.4, it was possible to use wiki page links with ampersands (&) and also different color in the link text

for instance : **Look & feel** gave the link like look & feel does

or **Look and feel** gave the link in blue color

Both works with external link syntax **Look and feel**

most probably it's the same error as describe in bug #3585

if it's helpful : I'm willed to give a bonus to the person who will fix the bug
