Description
    When I upgraded this site:

    http://alaindesilets.org/MyPublicSite/tiki-view_blog.php?blogId=1

    from 6.1 to 7.1, the layout got screwed up (I'm using the DarkRoom theme).

    Before the upgrade, the layout looked like this:

    - http://dev.tiki.org/tiki-browse_image.php?imageId=125

    After the upgrade, it now looks like this:

    - http://dev.tiki.org/tiki-browse_image.php?imageId=126

    Notice how the position of the login and the search forms changed, and how it looks weird in the TW
    7.1 version (plus, it causes a lot of waste in screen realestate).

Solution
    Actually, the problem disappeared after clearing the browser and the Tiki caches.

Easy to solve?
