Description

If CN contains any character of; æ,ø,å the login fails with "Invalid password" error.

Solution

If the workaround is a long term solution, more testing is needed.

Workaround

Workaround is to re-add the regex removed as seen here:

<http://sourceforge.net/apps/trac/tikiwiki/changeset/31339/trunk/lib/auth/ldap.php>

There is no obvious reason as to why that regex is there, but it solves the problem with the special characters in CN.
