Description
Setting post comment category permissions doesn't work
Case:
1) Assign global anonymous allowed to post comments
2) Create a category NoAnonymousComments
3) Set the permissions for this category so only registered users can post comments
4) Create a wiki page "a comment test" and assign it to the category NoAnonymousComments
5) Log out
6) Look at the wiki page "a comment test"
The anomymous user can see and post comments

Seems like category permission to post comments is ignored and only the global setting is applied.

Solution
Comments have a category scope starting in Tiki 8.
That solves this problem.
