Description
I register with additional Information in a tracker.
Registration works fine, but the userID (=email address) dont show up in the tracker list. But in the
Database at users_users it is there.

Solution
Could be a bug in Tiki 7 and should be fixed in Tiki 8. But just in case, please double check that your
user selector field as "auto-assign" set to creator.

Workaround
If the user field is mentioned in the field "Users Information Tracker Fields Asked at Registration Time"
at groups. It works fine. But that doesn't correspond with the text in
http://doc.tiki.org/User+Tracker
