Description

The conversion and upgrade went well except that page names were not converted

So I had to manually rename some pages for these characters:
Ã© -> é
Ã‰ -> É
Ã -> à
Ã¨ -> è

Wiki page attachments were associated the corrected page name. Thus, if I didn't rename the page, attachment wasn't available.

I reproduced on my local 8.x.

According to my preliminary analysis, this problems affects some pages, but not others. Some names which are entirely similar to well converted names stay misencoded.
