Description

With revision 31581 the LDAP group synchronisation has been limited to only happen 60 seconds after the login:

<http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki/trunk/lib/userslib.php?r1=31565&r2=31581&pathrev=31581>

So far as I can see this method is only called during the LDAP login procedure, so the if-statement in line 1415 will always be false, thus no synchronisation will happen.

I checked this problem with 7.1, 7.2 and 8.3 and never succeeded to get the groups from an AD although the LDAP login worked. After disseminating the code and removing this if-statement the feature works again.

I wonder what the the use of this if-statement was? The commit message refers to webdav changes -

how does it affect this?

Can this statement be removed so LDAP group synchronisation works or is there another way to fix this?

Solution

```
libs/userslib.php
1412c1414
-         if ( $tikilib->now - $current >= 60 && (
$prefs['syncGroupsWithDirectory'] == 'y' || $prefs['syncUsersWithDirectory'] == 'y' ) )
{
-             $ret &= $this->ldap_sync_user_and_groups($user, $pass);
-         }
+         $ret &= $this->ldap_sync_user_and_groups($user, $pass);
```
