Description

Tested in version 3.3 and 7:

Importing tracker items through CSV does not properly process the date field.

My exported CSV contains e.g. "24/12/2010 19:55"

The imported data only contains "24/12/2010" The time has been left out.

incorrect code 3.3

```
# Version 3.3 Line 1697 } elseif ($field['type'] == 'f' || $field['type'] == 'j') { if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = split('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = split('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } }
```

Replaced by following code :

correct code 3.3

```
elseif ($field['type'] == 'f' || $field['type'] == 'j') { $l = strlen($data[$i]); switch ($l) { case ($l == 10): # Field does not contain the time if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } break; case ($l == 16): # Field contains HH:MM list($fd, $ft) = explode(' ', $data[$i]); if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, 0, $m, $d, $y); } break; case ($l == 19): # Field contains HH:MM:SS list($fd, $ft) = explode(' ', $data[$i]); if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, $ss, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, $ss, $m, $d, $y); } break; } }
```

The same for the latest version 8.3

Incorrect code 8.3

```
case 'f': case 'j': if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = preg_split('#/#', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = preg_split('#/#', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'yyyy-mm-dd') { list($y, $m, $d) = preg_split('#-#', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } break;
```

Correct code v8.3

```
# Line 1730 case 'f': case 'j': $l = strlen($data[$i]); switch ($l) { case ($l == 10): # Field does not contain the time if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } elseif ($dateFormat == 'yyyy-mm-dd') { list($y, $m, $d) = explode('-', $data[$i]); $data[$i] = $tikilib->make_time(0, 0, 0, $m, $d, $y); } break; case ($l == 16): # Field contains HH:MM list($fd, $ft) = explode(' ', $data[$i]); if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $fd); $data[$i] = $tikilib->make_time($hh, $mm, 0, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $fd); $data[$i] = $tikilib->make_time($hh, $mm, 0, $m, $d, $y); } elseif ($dateFormat == 'yyyy-mm-dd') { list($y, $m, $d) = explode('-', $fd); $data[$i] = $tikilib->make_time($hh, $mm, 0, $m, $d, $y); } break; case ($l == 19): # Field contains HH:MM:SS list($fd, $ft) = explode(' ', $data[$i]); if ($dateFormat == 'mm/dd/yyyy') { list($m, $d, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, $ss, $m, $d, $y); } elseif ($dateFormat == 'dd/mm/yyyy') { list($d, $m, $y) = explode('/', $fd); list($hh, $mm) = explode(':', $ft); $data[$i] = $tikilib->make_time($hh, $mm, $ss, $m, $d, $y); } elseif ($dateFormat == 'yyyy-mm-dd') { list($y, $m, $d) = explode('-', $fd); $data[$i] = $tikilib->make_time($hh, $mm, $ss, $m, $d, $y); } break; } }
```

Workaround

Correct code for v3.3 is posted in the description.

Still working on the solution for v7.... Will be available later today (22/02/2012)

Edit :

Checked for the problem on latest stable version: Problem still exists in v 8.3

I Added the proper code into the description.

ATTENTION :

- I have no PHP skills whatsoever.
- Only tested the solution for version 3.3
- Solution for version 8.3 has not been tested and needs to be revised!!!

Edit 2 :

- replaced split and preg_split functions with the explode() function, as split() is EOL and preg_split() is not as fast as explode and regular expressions are not needed.
