Description
    Support inclusion of media in blogs to provide podcasting, vodcasting, etc.

    - Attachment of media files to blog posts
    - Association of URLs to other media files on Tiki or elsewhere to blog posts
    - Automatic recognition of relevant data from media files using getid3
    - Creation of fields in database to store relevant media data
    - Creation of enclosure and media XML tags in RSS feed
    - Display of media controls in blog entries
    - Test using iTunes and iPod, iPodder, Thunderbird, among others

    This should be an optional feature, admin through the Blogs Admin panel
    Should allow choice of db or file storage, but probably file storage will normally be used, as media
    files tend to be quite large.

    Existing image attachment functionality in blogs will need substantial improvement to support this.

Michael has taken up the torch for this work. See his efforts at
http://www.stovenour.net/TikiWikiPodcasting

Bernard Sfez / Tiki Specialist 30 Sep 21 13:51 GMT-0000

As per Tiki23 it is possible to store almost all type of files in a file gallery and to play it. (worst case you can set an HTML5 player with link to the "tiki" file (display123 or dl123)

Please retest and create a ticket for each issue you may encounter.
