Description

 I am following instructions in http://doc.tiki.org/Daily+Reports.
 When I run:
 php tiki-user_reports_send.php

 from the Linux command line or in cron, I get an error:
 This script can only be called by the server.

 $tikilib->get_ip_address() returns 0.0.0.0 not 127.0.0.1.

 I am in a shared hosting environment (A2Hosting),
 which could certainly contribute to the problem.

Solution

 One solution is to modify tiki-user_reports_send.php
 to accept both 127.0.0.1 and 0.0.0.0 as representing the server.

 Another solution is to modify $tikilib->get_ip_address()
 to default to 127.0.0.1 instead of 0.0.0.0
 although this might have many other side effects.

Hi CLif:

Please, fix in 8x svn (commit your fix).
In 9x the code changed, afaik, but still there is some temporary problem that might have been fixed in trunk.

See http://dev.tiki.org/Commit
