Description

Activating the PlugIn FullCalendar for the display of calendar items does not show event information as expected when using the 24h display mode.

It seems that FullCalendar is not aware of the setting (12h/24h) and shows the time as AM/PM anyway.

Solution

Call the PluIn FullCalendar with the appropriate parameters so that the admin/user settings are respected.

Workaround

Hacking /lib/fullcalendar/fullcalendar.js and /lib/fullcalendar/fullcalendar.min.js to hardcode the desired setting works.

Can you commit fixes to Tiki code base?

Thanks!
