When using field names with text for group titles, only the last part of the string is used. For example:

GROUP project_name "AAA project_name ZZZ":H1

If the project name is "upgrade system", the group title should be "AAA upgrade system ZZZ" Instead I get "ZZZ"

Using: GROUP project_name "AAA project_name":H1 I get "upgrade system"

It looks like the parser that is separating text literals from field names is discarding all but the last one.

Edit 16 Jul 2012 Also broken in v9.0

Fix the code so it is able to substitute in the actual field contents in the specified field and concatenate it together with other fields and other text pieces.
