Description

Left column formatting of blog posts seems to be broken in V9.1. This worked in V 7 and 8. The function called is BLOGLIST. It is called via Dynamic Content.

I tried using the bloglist plugin in a wiki page in a branch 9 Tiki installation (revision 42834), and the blog post content displayed as HTML code there also (not just in the left column).

Happened to check my username title info in the post I just made, and found it is also not parsed, but displays as raw HTML.
