Description
Tracker view item history (tiki-tracker_view_history.php) doesn't store data from an admin changing the associated username in a tracker item.
e.g.

1. a tracker contains some fields. One of them is field type username, with creator as param.
2. a registered user adds an item (so that this user has associated it's username to the field in that item)
3. an admin user (user with admin perm on that tracker) changes status from open to pending.
4. another admin user (with tiki_p_admin) edits that item, to change the field username from a value to another one.
5. tiki-tracker_view_history.php does not show that change in the table of values, but just the change from open to pending.

Reproduced here: http://r-es.org/item308
