Description

As user "xavi" (plain registered user, I mean, not a user with admin privileges, etc), I created a new
bug report here at dev.t.o/t5. Once saved, I attempted to:

- click at the Rating field - Stars (system), and I saw no effect.
- edit the tracker item, and clicked at one radio button option, and saved, but saw no effect.

In both cases, I still see that zero votes have been casted, etc.

As far as I remember, the choice of the user was stored, and showed somehow highlighted or
similar. Nowadays, it seems as if nothing is stored.

Reproduced, as example, here:
http://dev.tiki.org/tiki-view_tracker_item.php?trackerId=5&itemId=4361

I confirm that these perms are granted to registered users on the tracker object permissions, as well
as at global permissions:

- Can view rating result for tracker items (tiki_p_tracker_view_ratings)
- Can vote a rating for tracker items (tiki_p_tracker_vote_ratings)
- Can re-vote a rating for tracker items (tiki_p_tracker_revote_ratings)
