Description
The plugin Exercise is a nice way to for students to get feedback on their learning. For an instructor or an admin it would be very useful to have a way of checking student's success. That way, the instructor could evaluate how easy the material is, or if certain students need extra help with something.

As far as I understand, right now exercise input data is not stored in the database so there is no way to track the exercise outcome. It would be great if a table could be added to the database where the this data could be stored and accessed.
