Description

In Bernard's email he recommends the following:

Go to <https://dev.tiki.org/tracker5> Insert new item, go to "Area" select any.

As I'm creating this enter, after selecting Area: Main Feature, in the Drop-down for Sub-Category I'm seeing, as he said a list of meaningless catId's. (Bernard: "Check sub-category, instead of showing category name, it show catId.") As far as I know this problem exist since the rewrite of tables in v.9.x During TikiFest in Montreal in April, ca 12-14 April, Louis-Philippe fixed this problem for me in 11.x (then still Trunk). Sorry but I'm still in Africa, with expensive, and very unstable internet, so I can't check updates, but perhaps this can help someone find the solution. I'll be available for the group again, but only starting someone coming Monday, 27 May. No promises but perhaps I can find a solution then, but it will take time. olaf-michael (omstefanov)

Workaround

None that I know of, except reverting to a tiki prior to 9.x

Importance
