Dunno if this is a bug or a "Features", but if it's a "Feature", then it still needs to be addressed because I wasted 20 mins trying to figure out how to drag and drop modules.

Here is the problem:

- Start with a barebone installation of Tiki
- Go to Admin > Modules > All Modules
- Click on any module and drag it to the right hand side of the page  
  - Nothing happens.
- Click on any module and drag it to the left hand side but into a blank space somewhere below the menu.  
  - Nothing happens
- Double click on any module (as per the instructions on the Admin > Modules > All modules page)
in order to edit it
  ◦ Nothing happens

It seems the only places you can put the modules are:

  • Top or bottom
  • Or on the right hand side, but you have to drop it over the menu.
    ◦ This is not intuitive. I am not trying to insert the module into the menu. I am trying to put
      BELOW the menu. So it never crossed my mind to drop the module ON the menu.

Solution
r46198 but needs a rollback (or fix) of r40225 (on it's way)
