Description

I believe this is a regression and it seems to be related to composer.

I install a brand new (nothing configured yet) tiki-11.0.beta.tar.bz2 on my debian squeeze server.

Clicking on the icon in the admin main panel, I got the following error (feature activated or not):

```
Fatal error: require_once(): Failed opening required 'nusoap/nusoap.php'
(include_path='/var/www/sites/xxx/xxx.co.il/subdomains/www/html/vendor/bombayworks/zendframework1/library:/var/www/sites/xxx/xxx.co.il/subdomains/www/html/vendor/bombayworks/zendframework1/extras/library:/var/www/sites/xxx/xxx.co.il/subdomains/www/html/vendor/phpseclib/phpseclib/phpseclib:/usr/share/php:/usr/share/pear:/var/www/sites/xxx/xxx.co.il/subdomains/www/html/') in /var/www/sites/xxx/xxx.co.il/subdomains/www/html/lib/soap/wsdl.php on line 14 Call Stack: 0.0015 983032 1. {main}() /var/www/sites/xxx/xxx.co.il/subdomains/www/html/tiki-admin.php:0 0.1485 21077208 2. include_once('/var/www/sites/xxx/xxx.co.il/subdomains/www/html/admin/include_webservices.php') /var/www/sites/xxx/xxx.co.il/subdomains/www/html/tiki-admin.php:605 0.1502 21413568 3. require_once('/var/www/sites/xxx/xxx.co.il/subdomains/www/html/lib/webserviceslib.php') /var/www/sites/xxx/xxx.co.il/subdomains/www/html/admin/include_webservices.php:10 0.1510 21483008 4. require_once('/var/www/sites/xxx/xxx.co.il/subdomains/www/html/lib/soap/wsdl.php') /var/www/sites/xxx/xxx.co.il/subdomains/www/html/lib/webserviceslib.php:10
```

I have re setup.sh several time and tried the tips from: <http://dev.tiki.org/Compose>

Same.

I tested on demo and there it is working.

I don't know the setting there (and it is svn) but it should work on a linux server out of the box.

Solution

Bad include. Fixed in 11x r46563. Please confirm

Doesn't throw an error anymore.

However couldn't figure how it really work. 😊

I tested on my local machine, accessing: <http://freegeoip.net/json>
A free web service. Takes no parameters.
Works fine on my side.

Does this service work from your installation?

Jonny Bradley 04 Jul 13 18:39 GMT-0000

Seems fine for me too - nice test url, thanks Arild - set up here no problem (although i thought packaged tar balls didn't need composer - didn't notice that before)
