Description
The Strasa theme does not seem to work properly.
The content is against the LHS of the screen rather than in the middle and the menu is off the bottom of the pages.

We have just done the upgrade from 10.0 to 11.0

We have adopted the tikinewt theme instead but would rather go back to the Strasa if we could.

I now think this problem is to do with the upgrade I did. Have done a clean install and the theme works fine that way.

I have tried to reproduce this issue as well. Looks like you are right. There was something in the upgrade process that had caused the issue.

Hope that you were able to solve it.

thank you for reporting the bug
