Description

we are using ldap for login to tikiwiki. If the user has a > or < character in his password he is not able to login to tikiwiki. He will get the message "password is not correct".
I assume that this might be a code problem in php or html so that tikiwiki interprete these characters as code?

The Problem will be found here:

-> /srv/www/htdocs/tikiwiki/tiki-setup_base.php

in the line:

```
614: $_POST = $inputFilter->filter($_POST);
```

...in which obviously all Request-Parameters will be somehow filtered inklusive Password (\$_REQUEST'pass'). Before/After the Request-Hash looks as follows (Test-Password: Ordix<0590):

```
<!-- array(5) { %22user%22=> string(2) "ca" %22pass%22=> string(10) "Ordix>0590"
%22login%22=> string(6) "Log In" %22stay_in_ssl_mode_present%22=> string(1) "y"
%22stay_in_ssl_mode%22=> string(1) "n" }
-->
```

```
<!-- array(5) { %22user%22=> string(2) "ca" %22pass%22=> string(9) "Ordix0590"
%22login%22=> string(6) "Log In" %22stay_in_ssl_mode_present%22=> string(1) "y"
%22stay_in_ssl_mode%22=> string(1) "n" } the "inputFilter" will be declared here: 606:$inputFilter
= DeclFilter::fromConfiguration($inputConfiguration, array('catchAllFilter')); it seems to be a Bug
inTikiwiki. is there a solution?
```

Solution

Merging with Issue

<https://dev.tiki.org/item4599>

Workaround

we have now removed the filter for the password.

affected file is wikix:/srv/www/htdocs/tikiwiki/tiki-login.php (line 15)

```
9 $inputConfiguration = array(  
10 array( 'staticKeyFilters' => array(  
11 'user' => 'text',  
12 'username' => 'text',  
13 // upd by ts Fr 19. Jul 13:16:29 CEST 2013  
14 // Entered password wir be no longer filtered  
15 //'pass' => 'text',  
16 ) )  
17 );
```

So then logging with special characters works (although you could now also integrate with any unsightly code)

Is there a possibility to check this filter for certain bugs?
