Description

Was getting the following error in my CGI Log when I tried to display the File Galleries in Tiki 11.0:

```
PHP Fatal error: Uncaught exception 'SmartyCompilerException' with message 'Syntax Error in
template "../../../../wiki_11/templates/tiki-list_file_gallery.tpl" on line 253
"{quotabar length='100' value=$smarty.capture.use}" unknown tag
"quotabar"' in
../../../../wiki_11/vendor/smarty/smarty/distribution/libs/sysplugins/smarty_internal_templatecompil
erbase.php:665
```

I recalled having this problem a few times after an upgrade all the way back to version 8. The way I have fixed it is simply to go into templates/tiki-list_file_gallery.tpl and remove the expression {quotabar length='100' value=\$smarty.capture.use}. Once I do that and upload the modified file, I'm able to display my file galleries. Don't know if that will work for everyone, but it has worked for me.

Why is there a problem with quotabar? That's a file that I notice won't upload when I use Filezilla to upload the files for a new installation, so maybe that's the source of the problem. It seems to me that this issue has been around for several versions now. Can someone please fix it? Thanks in advance.

Did this problem only ever happen to you after an upgrade? Could you describe what kind of files or how many you had in your file gallery?

Where all your galleries not displaying or only certain ones?

thank you for your help and cooperation as we try to solve this bug
