Description
Can't remove any items from a Wiki Structure directly after adding it to the structure. HTML/NULL error.

The bug was originally discovered on doc.tiki.org. I thought this could be due to the large volume of items we have in that Structure but I was able to reproduce the bug on a simple instance of Show.

Solution
Improve the contrast of that question that tiki asks before removing the page. This also need to be a feature request. Make the messaging much clearer

Workaround
Improve the contrast of that question that tiki asks before removing the page. This also need to be a feature request. Make the messaging much clearer

Comments

Pascal St-Jean 08 Aug 13 23:55 GMT-0000

you put as Resolution that it works for you but didn't demonstrate it.

I am able to reproduce this bug consistently on all my browsers. I even demonstrated it on Show. Therefore the resolution is NOT works for me.

If you have a solution please share more information.
