Description
    If you write a wiki article for example and want to insert a image or picture you already uploaded you use the button for picture.
    Then you select file galleries as the data source and want to select a file directly within the file gallery.

    That's not the real problem. But as soon as you use elFinder for file gallery view you still can select a image but it will always insert a whole code tag within the "image id" field (eg.) and not only the fileid itself.

    The fix is really easy, you just need to edit the file yourtikihome/templates/tiki-list_file_gallery.tpl at line 294 and replace this line with the following:

templates/tiki-list_file_gallery.tpl

```
    window.opener.insertAt('{{$filegals_manager}}', data.fileId);
```

    Maybe you should fix this in a following version, as it's really annoying to fix the form every time.

---

the patch doesn't seem to work. still having the issue of the full plugin code gets injected.

This is probably a Jonny bug now since it touches ElFinder

Solution

Comments

Pascal St-Jean 20 Aug 13 17:57 GMT-0000

Good day,

thank you very much for your suggested patch. We will be more then happy to commit this for you and have it part of Tiki 12.

But it would be even better if you'd like to commit the change yourself. https://dev.tiki.org/How+to+get+commit+access

We are always on the lookout for interested developers. We are a very open community and always enjoy having new members.

If this is not something that is of interest then please let us know and we will commit the patch for you.

Thank you again

sam91 04 Sep 13 08:23 GMT-0000

Hello,

please commit this patch for me.

Best Regards
Sam

Arild Berg 27 Sep 13 11:17 GMT-0000

I tried to check, but the password has changed, and I don't know what the new password is

Marc Laporte 02 Nov 13 22:41 GMT-0000

There should now be a tool to reset the admin password

Pascal St-Jean 23 Nov 13 23:48 GMT-0000

might need Jonny to jump in on this one since its an Elfinder thing. the patch didn't solve the issue from my tests

Jonny Bradley 26 Nov 13 16:02 GMT-0000

I unknowingly rolled it back in r48557 to fix a different issue - this code is used in many different scenarios, so 48348 broke the wysiwyg html image tool. The fix needs to be upstream where data.wiki_syntax is defined... will look into it
