Description

Yet, the regular mode works fine on my Android phone.

Workaround

Using chrome on Android, I could browse all pages in nextdev.tiki.org and nextdoc.tiki.org. Well, almost all pages: see item4770

So maybe this is a mobile-browser-specific question?

probably will investigate JQuery Mobile after Bootstrap in order to clearly know where Tiki is going from a Mobile Point of view

Given Tiki12 LTS will be supported for 5 years, perhaps a note to indicate what is happening / not working? Or a "known limitations" section

Thanks Marc: section added.
