Description
I tested the installation of Tiki trunk in a language different than English (Catalan, in my case), and at the end of the wizard, when I'm supposed to enter Tiki, I get an error 500 message.

Repeaating the same installation procedure and options but in English since step 1, can finish the installation process and admin wizard without issues.

Solution
There were two critical errors in some translated strings that contained smarty code, that were creating these error 500.
Fixed in lang/ca/language.php r47423
