Description

With feature_search enabled errors produced from error.tpl etc end up with the header, modules etc being repeated inside the page under the error message.

This can be seen here: <http://demo.tiki.org/12x/made+up+page>

This is a side-effect of the change to using Smarty Inheritance in the tempting system and due to tiki-searchindex.tpl now using "{extends 'layout_view.tpl'}".

Should also happen with feature_search_fulltext but the logic's borked currently... will fix that once this is fixed.

Solution

r48283 refactors the tpl - tried a redirect fix but couldn't get it to return the 404 code. Will attach a patch of how far i got to this item
