### Description

Can someone give more details on this one?

I believe the problem occurs when someone goes to edit a page then uses the browser buttons, links or types a new URL without clicking either the save or cancel buttons. — mdavey

A related issue is that the lock is checked /before/ all the permissions checks have been done. The result is that one can try to edit a page as anonymous, get an error warning, login, try again only to be told that 'Anonymous' is editing the page. — mdavey

obs: waiting for cvs to unlock to commit

### Solution

Confirmed fixed for Tiki 1.9.3

This error is present in BRANCH-1-9 as of today -> The result is that one can try to edit a page as anonymous, get an error warning, login, try again only to be told that 'Anonymous' is editing the page.
