Description

relative links with url like "show:MySlideshow" are not prepended the domain in the url. when tiki installed in a subfolder (<http://example.com/tiki/>). I.e., this code:

```
{button href="show:MySlideshow#s1" _text="Slideshow"} {button href="dl543" _text="Slides in PDF"}
```

would keep the link in the first button as just "show:MySlideshow#s1", while the second one will be converted into the full url (prepended with the domain): <http://dev.tiki.org/dl543>

Example:

This code seems to behave well in dev.t.o, but it does reproduce the error in demo.t.o/12.x/: <http://demo.tiki.org/12x/HomePage>

Solution

Currently Works for me with r48466. marclaporte

It does not yet work for me. See <http://demo.tiki.org/12x/button> , using Friday 17 of January, 2014

Workaround

Manually write the full url in the link of that first button.

Out of date in current LTS versions such as Tiki21. Closing.

Hi Xavi,

Do you know what version this used to work in? Any idea what could have effected the rewrite rules to break?

Marc Laporte 17 Nov 13 00:56 GMT-0000

<http://dev.tiki.org/Slideshow+test>

```
{flash type="url" movie="display602" width="470" height="545"}
```

Pascal St-Jean 17 Nov 13 22:08 GMT-0000

My question was if anyone knows what version this actually did work in. If this is a regression, when did it break. This info would help our dev team

Marc Laporte 09 Dec 13 09:00 GMT-0000

Sometimes works, sometimes not?

<http://dev.tiki.org/Slideshow+test> is not

luciash d' being 09 Apr 14 17:03 GMT-0000

but a protocol mistake - the browser thinks show: is a protocol like file: or https: and thus tries to interpret the relative link as it was a protocol show://

the relative links containing ":" must be pretended by ./ to indicate it is relative to current dir path...

so this should work(around): ./show:MySlideshow

luci
