Description
    Hi,

    When trying to use the Tiki Importer for Mediawiki, I ended up with a blank page.

    Reproducible everytime:

- Menu Admin / Tiki Importer
- In the dropdown box "Select the software to import from", select Mediawiki
- Click OK

    => blank page

    I added this to view errors:
    ini_set('display_errors',1);
    error_reporting(E_ALL);

    Fatal error: require_once(): Failed opening required 'Text/Wiki/Mediawiki.php'
    (include_path='/path/to/my/tiki/vendor/bombayworks/zendframework1/library:/path/to/my/tiki/vendo
    r/bombayworks/zendframework1/extras/library:/path/to/my/tiki/vendor/phpseclib/phpseclib/phpsecli
    b:.:/usr/lib64/php/:/usr/share/pear/:/usr/share/php/:/path/to/my/tiki/') in
    /path/to/my/tiki/lib/importer/tikiimporter_wiki_mediawiki.php on line 9

Indeed there is no Mediawiki.php in those folders

Workaround:
I found this file in the folder /vendor_extra/pear/Text/Wiki/
I copied the folder Text into /vendor/bombayworks/zendframework1/library
The file was properly called.

I guess it would be better to correct or add the path but I don't know how.

Thnak you!

Solution

Hi **@SCO2land**,

Direct includes would cause error, so I just removed it from the file. Now the error is gone. But I did not test with mediawiki import files. Can you please test this with 12x version, it's fixed now.

Please check this commit id: 48535.

This issue is due to a change in how we handle our external libraries. This change was brought into Tiki in version 11.

There are still some external libraries that were not converted such as this one.

thank you for the find and the report

Marc Laporte 17 Nov 13 04:47 GMT-0000

http://sourceforge.net/p/tikiwiki/code/45575

Torsten Fabricius 21 Nov 13 21:34 GMT-0000

I did write an email to the user who made the bug report.
I could not check, as no MediaWiki example file at hand.

Mani did fix for Tiki12. I close and ask user to feedback after he checked with Tiki12 beta - in case the bug would still appear I'll reopen the report.
